Black Ice Software has released the Printer Driver version 15.65!

Black Ice Software's newest features for the Cover Page Filler include a Barcode control that enables users to design forms with Barcodes!

One or more **fields within the form can be assigned to the generated Barcode**, allowing the barcode to then display the value of a specific field or fields. The barcode value is computed when the form is filled out by a user and based on the value entered by the user into the field.

For Example, when a medical form is filled out by a user the patient's **Insurance ID number** or **Claim Number** can be **paced as a barcode** on the top left corner for Indexing and routing in a workflow environment.

The Barcode control can also be used for static values that the Form Filler cannot change. For example; a medical institution's website with a logo.

The added barcode types that can be selected are:

- 2D barcodes
- QR – the most common barcode
- PDF417
- DataMatrix
- Liner 1D barcodes
- Codabar
- Code 11
- Code 3 of 9 (Code 39)
- Industrial 2 of 5
- Interleaved 2 from 5
- Matrix 2 of 5
- Plessey
- Code 128
- EAN-8
- UPC-A
- UPC-E
- And more…

The complete list of improvements in the latest Printer Driver includes the following:

- Updated the Cover Page Filler to version 1.05.343
  - Added the Barcode feature
- Updated manuals

RTK Version history:

- Added the 64-bit Install and Uninstall dlls
- Added the C# Install Sample 64-bit
