Black Ice Software - January 2010

NEW! - HTML Printer Driver

Announcing Black Ice Software's HTML Printer Driver, the newest self-contained driver component of our ColorPlus and Color Printer Drivers. With the release of Color/ColorPlus 11.00, IT professionals and developers can now convert any printable document into an editable, ready-to-publish HTML file with text, pictures, graphics, and styles, ideal content management servers. Licenses starting as low as just \$49.99!

Text Handling Features

Texts are extracted into editable HTML paragraphs exactly positioned and formatted according to the source document, and automatically supports strikethrough, underline, italic, and bold text declarations!

Image Handling Features

Any images in the document will be extracted and converted into individual PNG files and saved in a separate directory inside the output directory. Image tags and positioning are automatically inserted into the HTML output of the document. Vector graphics in the document are converted into transparent PNG images and positioned on the webpage according to its original location. Vector graphics can also be disabled.

CSS Handling Features

Perhaps the most impressive feature of the HTML Printer Driver is the CSS handling features. The HTML Printer Driver supports both internal and external CSS. Styles for the document can be embedded internally into the header of the HTML output, or written externally to a CSS file. A single CSS file can be created for the entire document, or individual CSS files can be created for each corresponding page of the document!

Be sure to download the evaluation for Color 11.00 or ColorPlus 11.00 and try out this amazing new feature. For more information and purchasing, see below. If you are a current Maintenance subscriber, be sure to send an e-mail to sales@blackice.com requesting your free upgrade!
