Users can now **remain HIPAA compliant** when **uploading documents** to a Web Server though HTTPS/HTTP protocol with the latest release of the Black Ice Printer Driver 15.55! This is done by uploading the document directly to the Web Server **without writing the document to the local PC disk.**

Many **EMR** (Electronic Medical Record) & **EHR** (Electronic Health Record) **applications** use a Web interface for HIPAA compliance so medical records are never stored on the local PC, but **users need to exchange, convert and upload documents between their different HIPAA compliant applications.**

The Black Ice Virtual Printer Driver provides a simple solution by **converting the printed**

document in memory and then uploads the document to the secure Web Server.

The PDF or TIFF files created by the printer driver are **never written to the local disk** drive and the documents remain HIPAA compliant.

The Printer driver can be **pre-configured during Installation** using the MSI installer for **large scale deployment** or can be configured manually after installation by selecting a HTTPS-in-Memory profile.

The complete list of improvements in the latest Printer Driver includes the following:

- Added support for the "Generate output in memory" feature to HTTP uploading (Uploading document without writing the document to disk) (#11306)
- Stability improvement for detecting administrator privileges in end user printer driver installers (#11305)
- Updated the digital signature certificate on software components
- Updated eLicense.dll to version 6.04.225
  - Stability improvement for registration on Korean systems (#11202)
- Updated Manuals
