Printer Driver 13.23 and Document Imaging 12.02 is released

Black Ice Software is announcing the release of the Printer driver version 13.23 and DocumentImagingversion 12.02.

Black Ice Software continues to add fine improvements to the printer drivers and for the API/RTK (Resource Tool Kit). Version 13.23 includes changes to the Start Application module for multi-driver installations. Customers who are using multiple drivers installations on the same system, could launch "Start" only one application since the "Start Application" module name of the printer driver was hard coded and one could not configure it. With version 13.23 the "Start Application" named can be conveniently specified in the INI file.

One can change the name of the MessagingInterface in the driver's INI file, using the "InterfaceName" key.

InterfaceName=<string>

In version 13.23 the Batch Converter and Auto-print module are further improved for high volume document conversions and better integration with Microsoft Office automation tools.

The DocumentImagingSDK version 12.02 includes only a stability improvement for the DocumentImaginglibraries and for the sample applications
